ERP — Staff User Guide

Setting your password, signing in with two-factor authentication,
and using the ERP day to day

Field	Detail
Document	Standard Operating Procedure — ERP for staff
Audience	All Illume staff with an ERP account
Applies to	illumestudentservices.cloud
Version	1.3
Issued	9 October 2026
Owner	IT

About the screenshots in this guide

Every screen shown here was captured from the live application using a demonstration account, which was deleted afterwards. No colleague's personal details, leave record or tasks appear anywhere in this document. Where a screen showed a security code, that part of the image has been blurred on purpose.

1. Before you start

You will need two things. Please have them both to hand before you begin, because setting up your account cannot be paused halfway through.

- **The welcome email.** Sent to your work address as soon as your account is created. It carries the link you use to set your own password, and that link stops working after 72 hours.
- **A smartphone.** You will install a free authenticator app on it. Any phone will do.

Nobody sends you a password

There is no temporary password, and IT cannot tell you yours. You create it yourself from the link in the welcome email, and from that moment only you know it. Anyone who contacts you offering your password, or asking for it, is not from Illume.

The ERP works in any modern browser — Chrome, Edge, Firefox or Safari. You do not need to install anything on your computer.

Which authenticator app?

Any of these work. If your phone already has one, use that one.

- Microsoft Authenticator
- Google Authenticator
- Any other app that supports TOTP codes

If you do not want to install an app

There is a second option: the system can email your code to you instead. It is offered on the setup screen as “Email my codes instead”. Please use the app if you can. Email is less secure, because anyone who reaches your mailbox could also reset your password — both of your security factors would then be in the same place.

2. Setting your password

Your account starts with no password you can use. The welcome email gives you a one-time link to create one.

Step 1 — Find the welcome email

The subject line is “Welcome to Illume — set your password”. It lists your employee ID, job title and the email address your account uses. Check that the email address shown is the one you expect, because that address is your username from here on.

The link expires in 72 hours

If more than three days have passed, the link will no longer work. Do not worry — open the sign-in page, choose “Forgot password”, and a fresh link will be emailed to you. You can also ask IT to send the welcome email again.

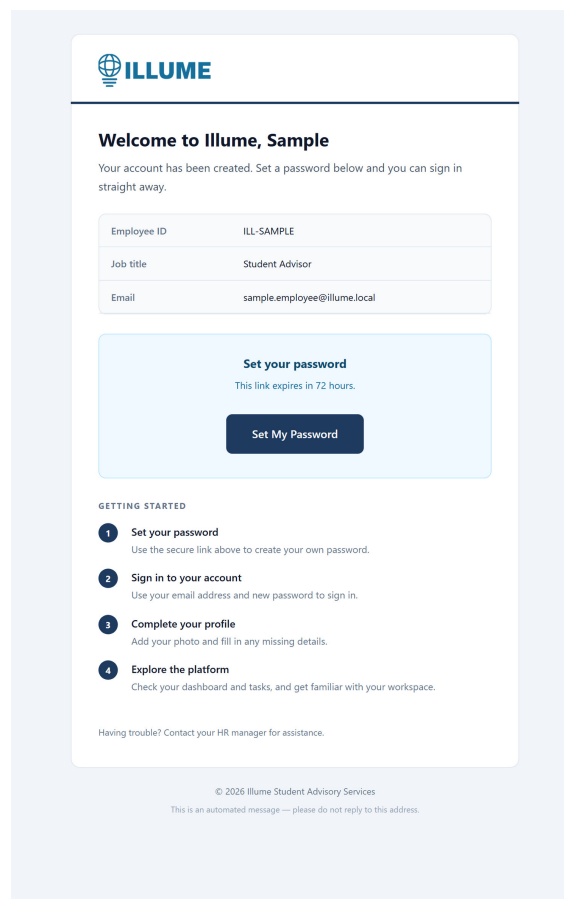

Figure 1 — The welcome email. Select Set My Password.

Step 2 — Create your password

The link opens the Set Your Password screen. Type the password you want to use, then type it again to confirm.

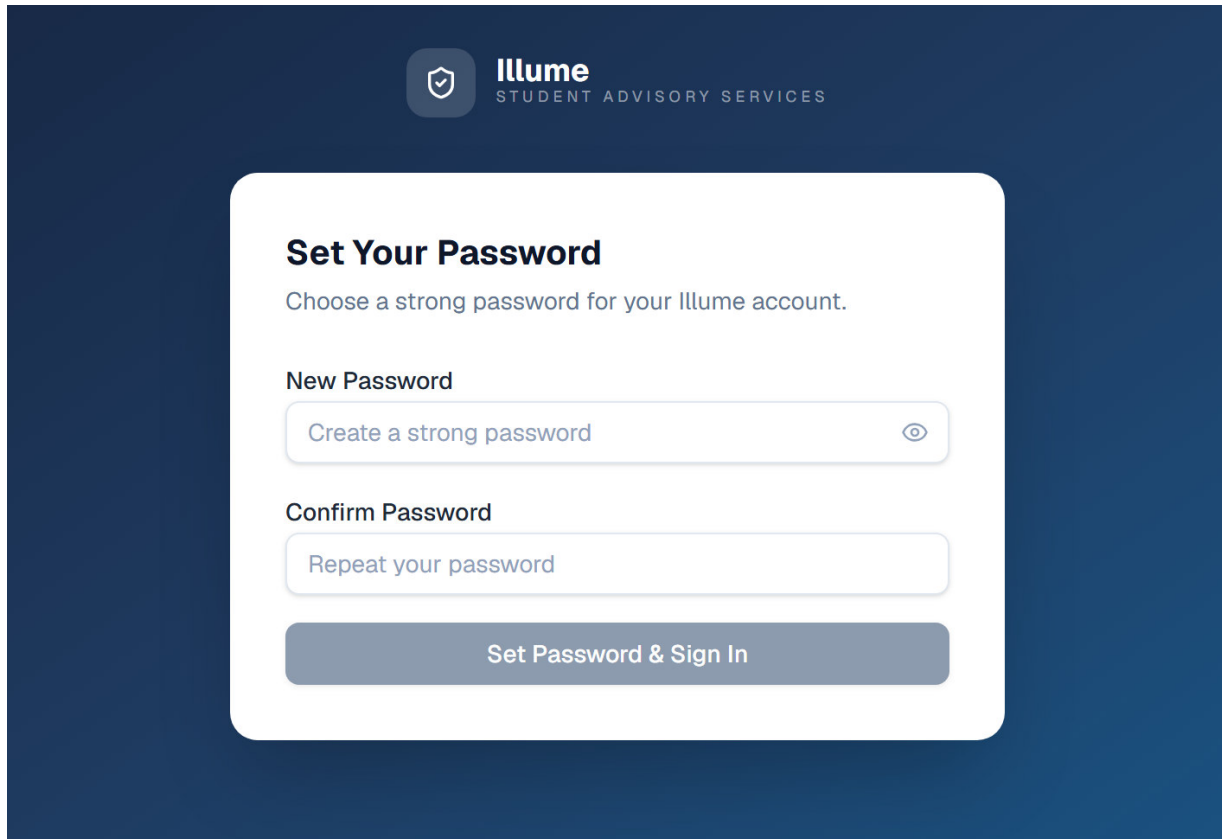

Figure 2 — The Set Your Password screen. Fill in both boxes, then select Set Password & Sign In.

Choosing a good password

- Long beats complicated. Three or four unrelated words are both stronger and easier to remember than one word with symbols substituted into it.
- Do not reuse a password you use anywhere else, and never reuse one you have used on this account before — the system will refuse it.
- A password manager is the easiest way to keep it safe. Write it down on paper if you must, but not on a note stuck to your screen.

Step 3 — You are sent to the sign-in page

You will see a short confirmation and then be taken to the sign-in page. The button is labelled Set Password & Sign In, but you do still have to sign in yourself on the next screen — that is expected.

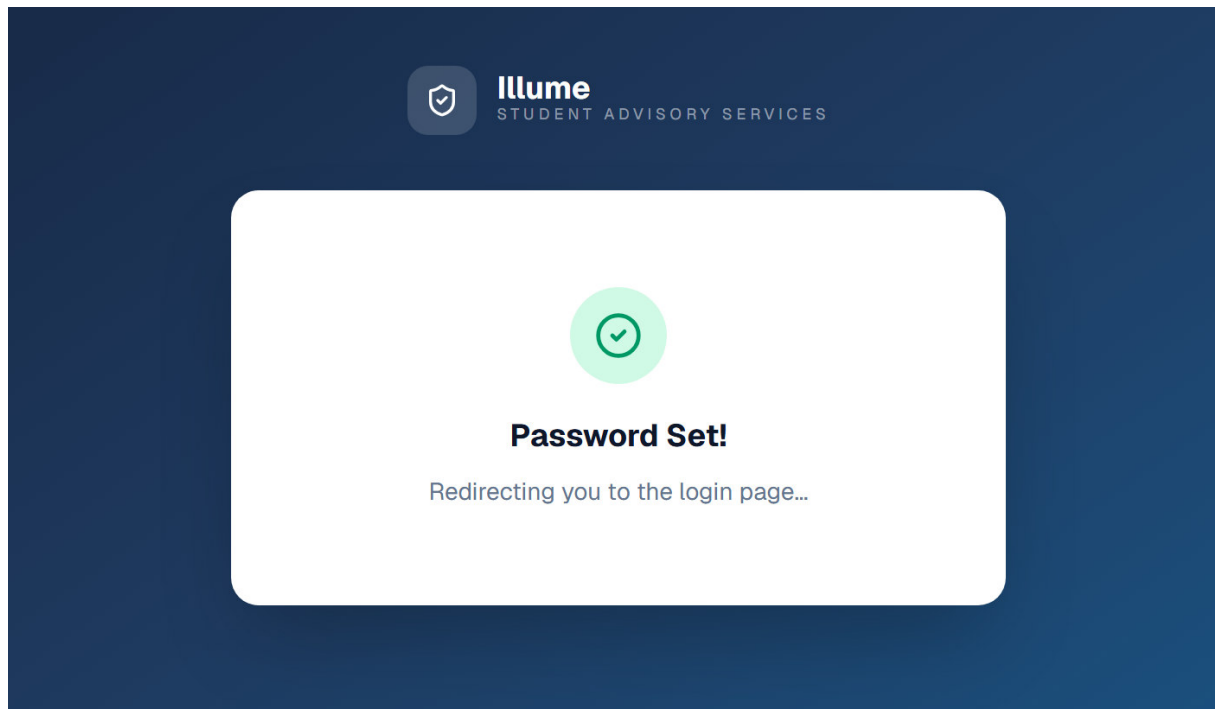

Figure 3 — Your password is set.

3. Signing in for the first time

This section is only needed once. After it is done, signing in takes a few seconds.

Step 1 — Open the sign-in page

Go to illumestudentservices.cloud. You will see the sign-in screen.

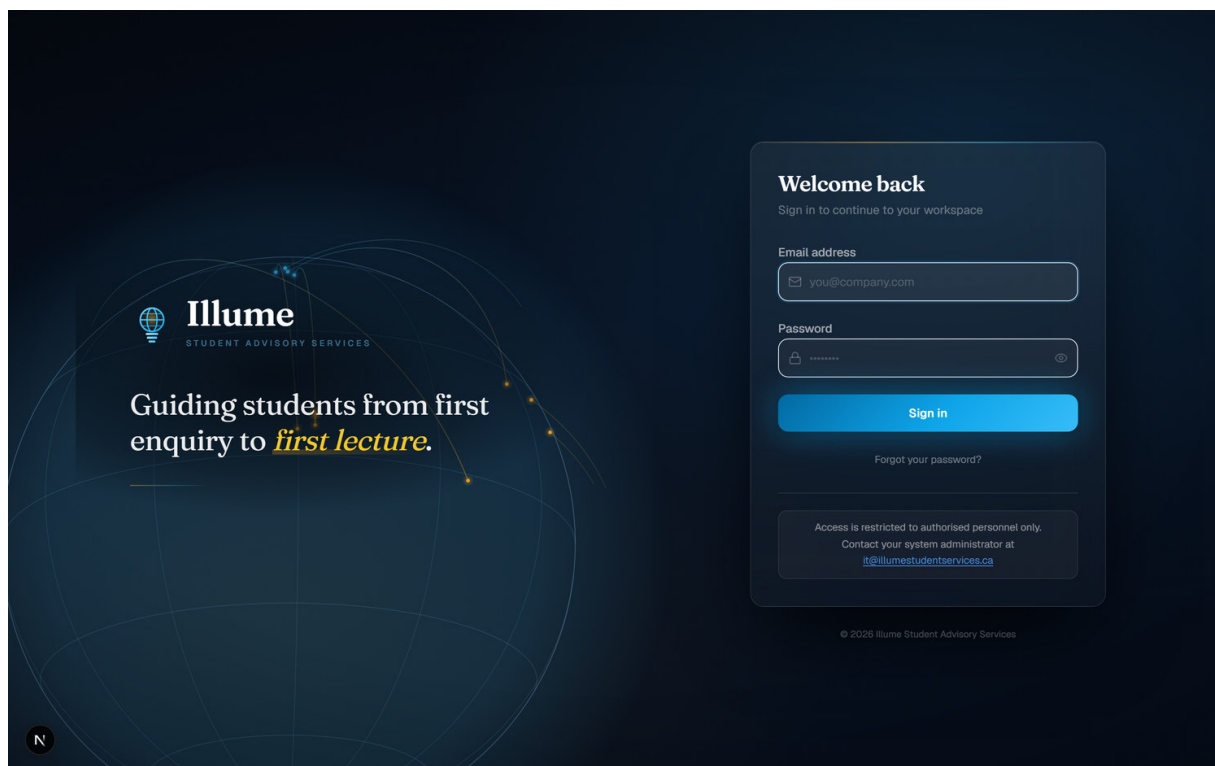

Figure 4 — The sign-in screen.

Step 2 — Enter your email and password

Type your work email address and the password you created in section 2, then select Sign In.

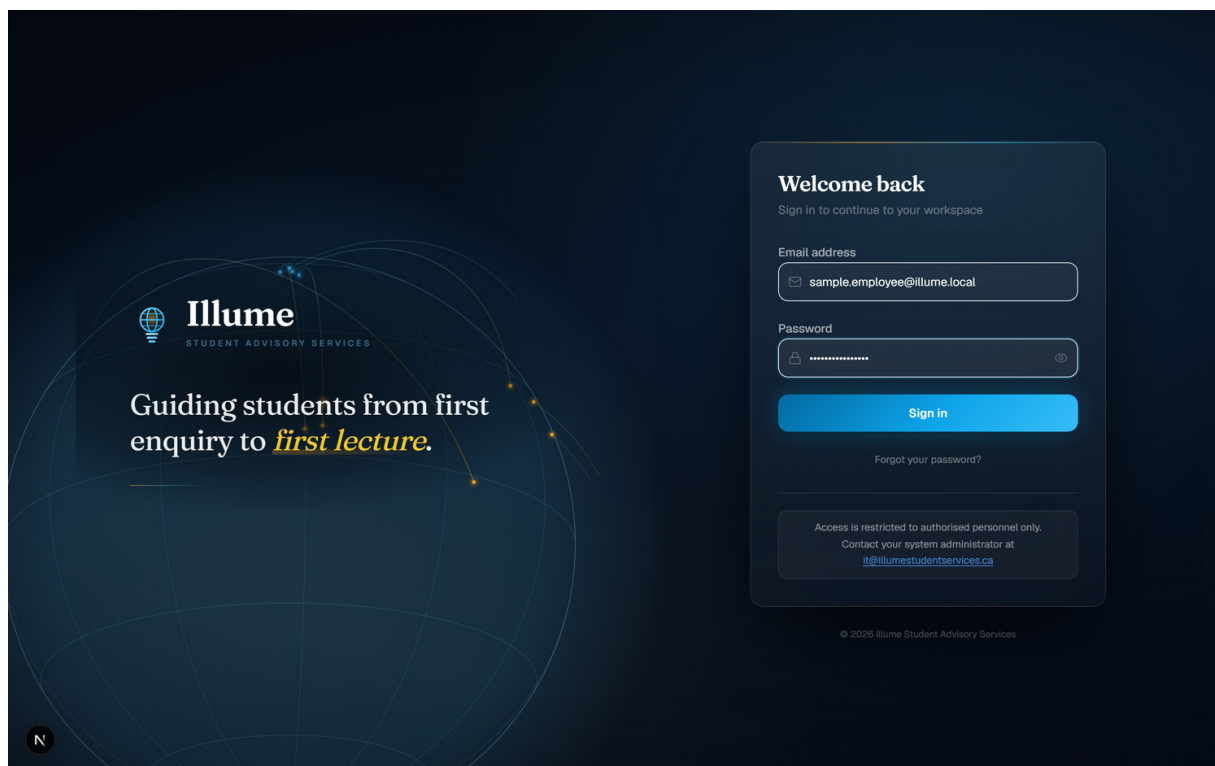

Figure 5 — Email address and password entered.

Step 3 — Begin two-factor setup

Because this is your first sign-in, the system asks you to set up two-factor authentication before it lets you any further. This is required for every account, without exception. Select Begin setup.

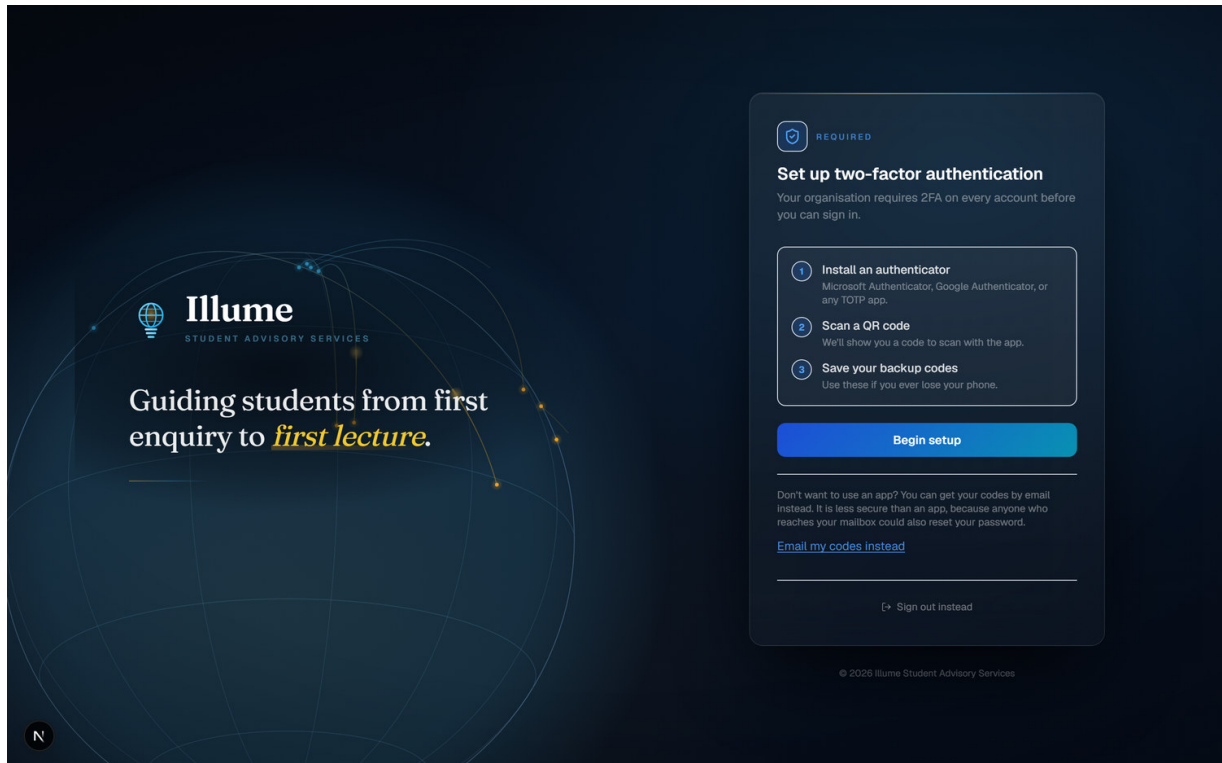

Figure 6 — The two-factor setup screen, shown at first sign-in.

Step 4 — Scan the QR code

A QR code appears. Open your authenticator app, choose to add an account, and scan the code with your phone's camera. The app will then start showing a 6-digit number for Illume CRM that changes every 30 seconds.

The QR code is blurred in this guide on purpose

The code shown on your screen is unique to you. It is the key to your account. Never photograph it for anyone else, never email it, and never put it in a shared document.

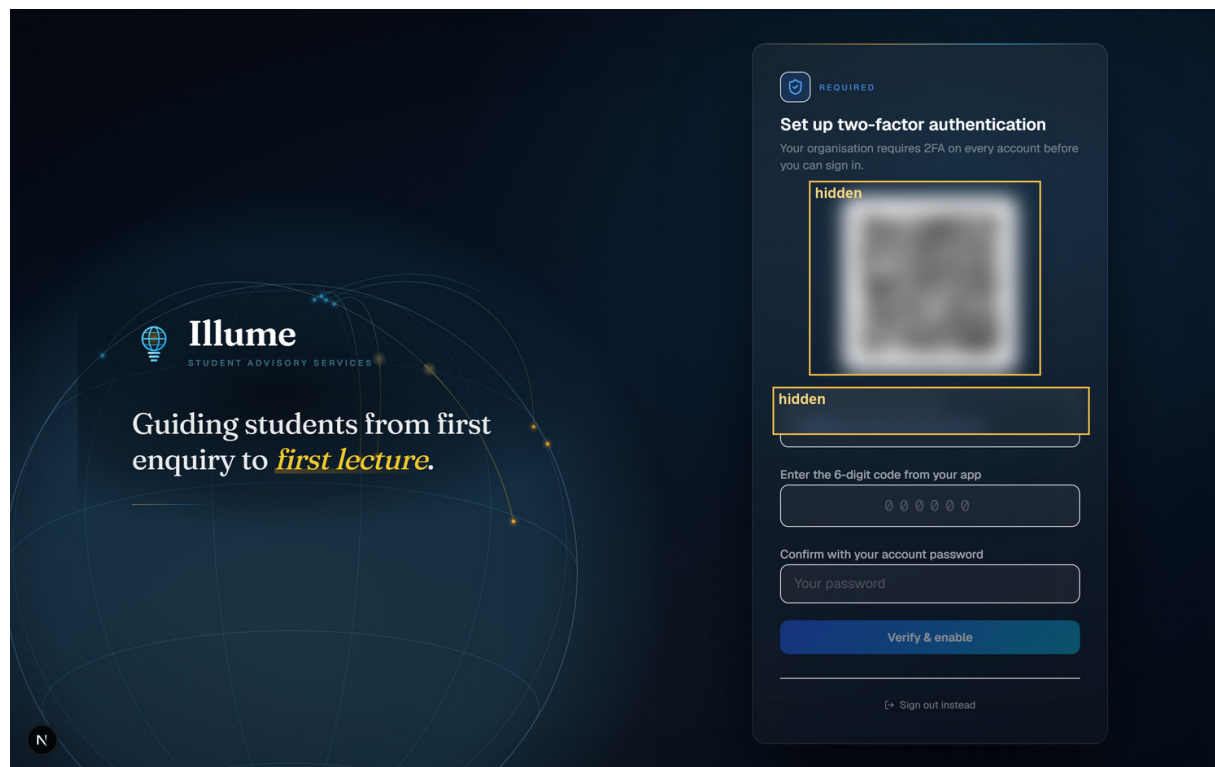

Figure 7 — The QR code screen. Scan the code with your authenticator app.

Step 5 — Enter the code and confirm with your password

Type the 6-digit number from your app into the box. You will also be asked for your account password a second time. This is deliberate — it proves it is really you turning on two-factor authentication. Then select Verify & enable.

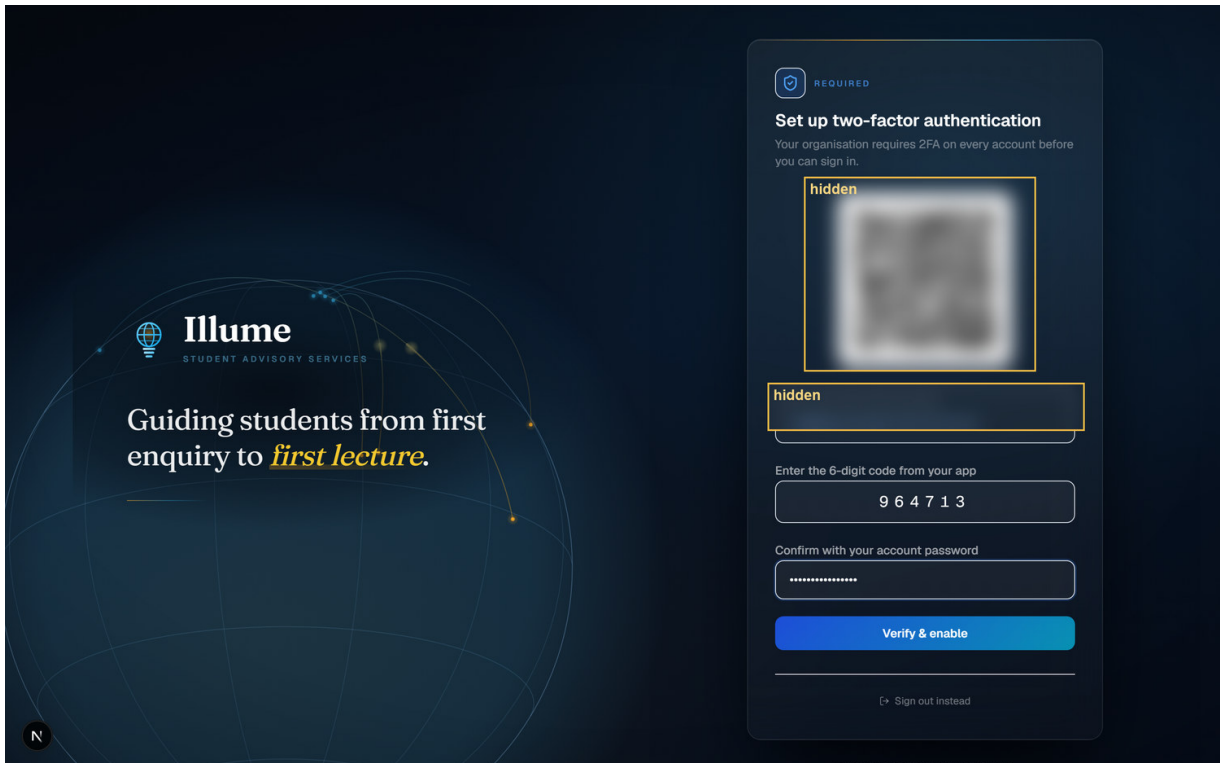

Figure 8 — The 6-digit code and your password, ready to confirm.

Step 6 — Save your backup codes

Two-factor authentication is now active, and the system shows you eight backup codes. These let you sign in if you ever lose your phone. Each one works once, and they are never shown again.

Save these somewhere safe, now

Put them in a password manager, or print them and keep them somewhere secure at home. Do not save them in your email, in a note on the phone that holds your authenticator app, or in a shared folder. If you lose both your phone and these codes, IT has to reset your account for you.

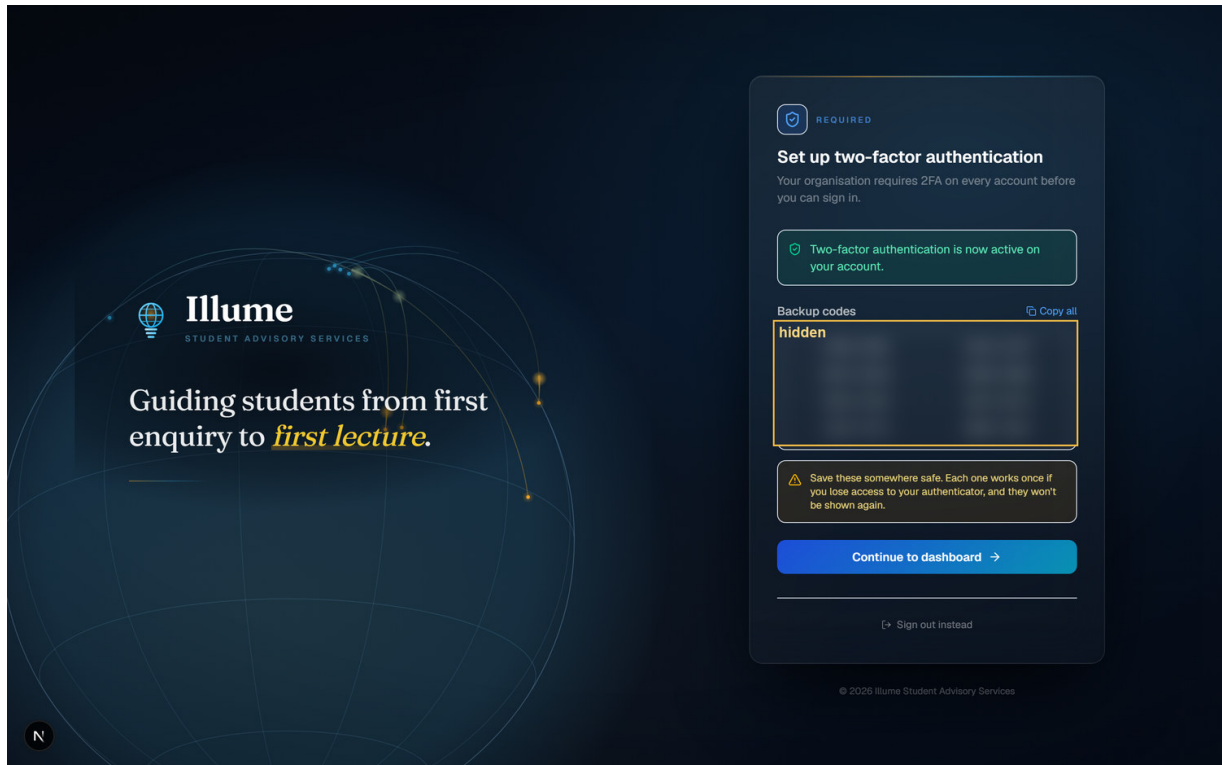

Figure 9 — The backup codes screen. The codes are blurred here — yours will be visible.

Step 7 — Sign in again

Setting up two-factor authentication does not sign you in. You will be asked to sign in once more, and this time the system asks for a code from your app. This is normal and only happens on this first occasion.

From now on, signing in is: email, password, then the 6-digit code from your app.

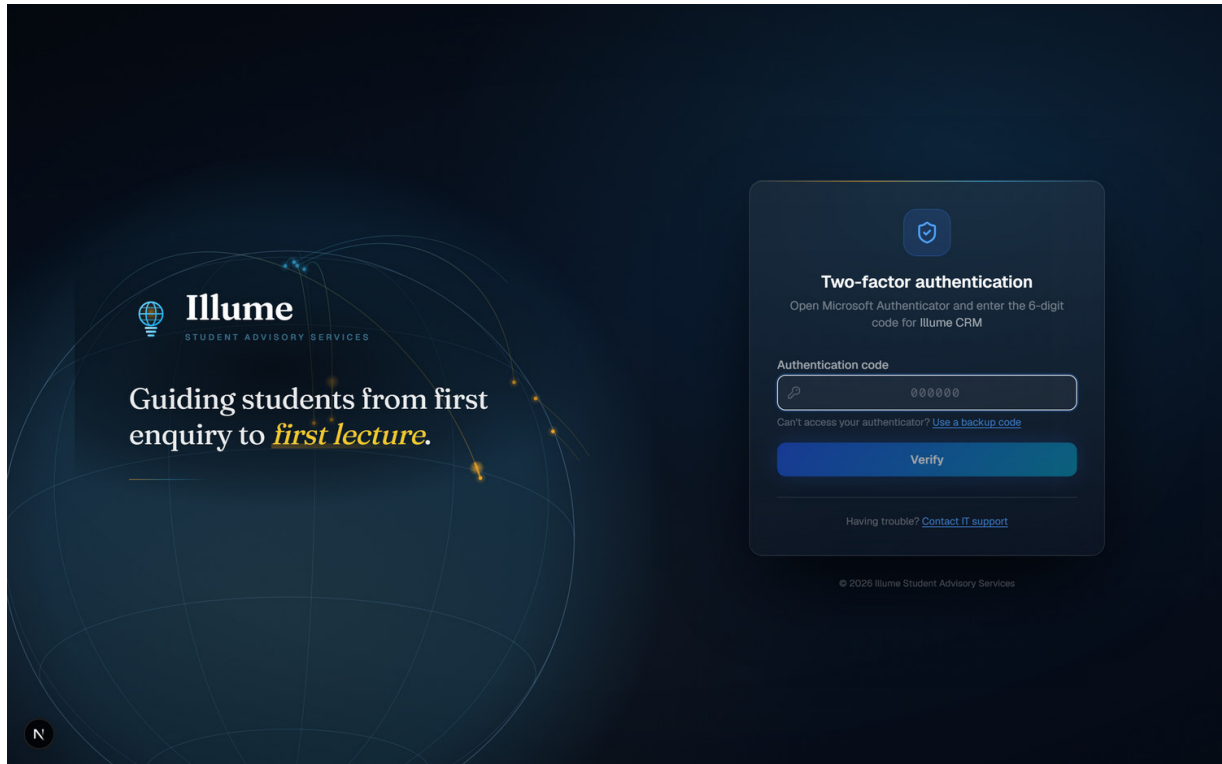

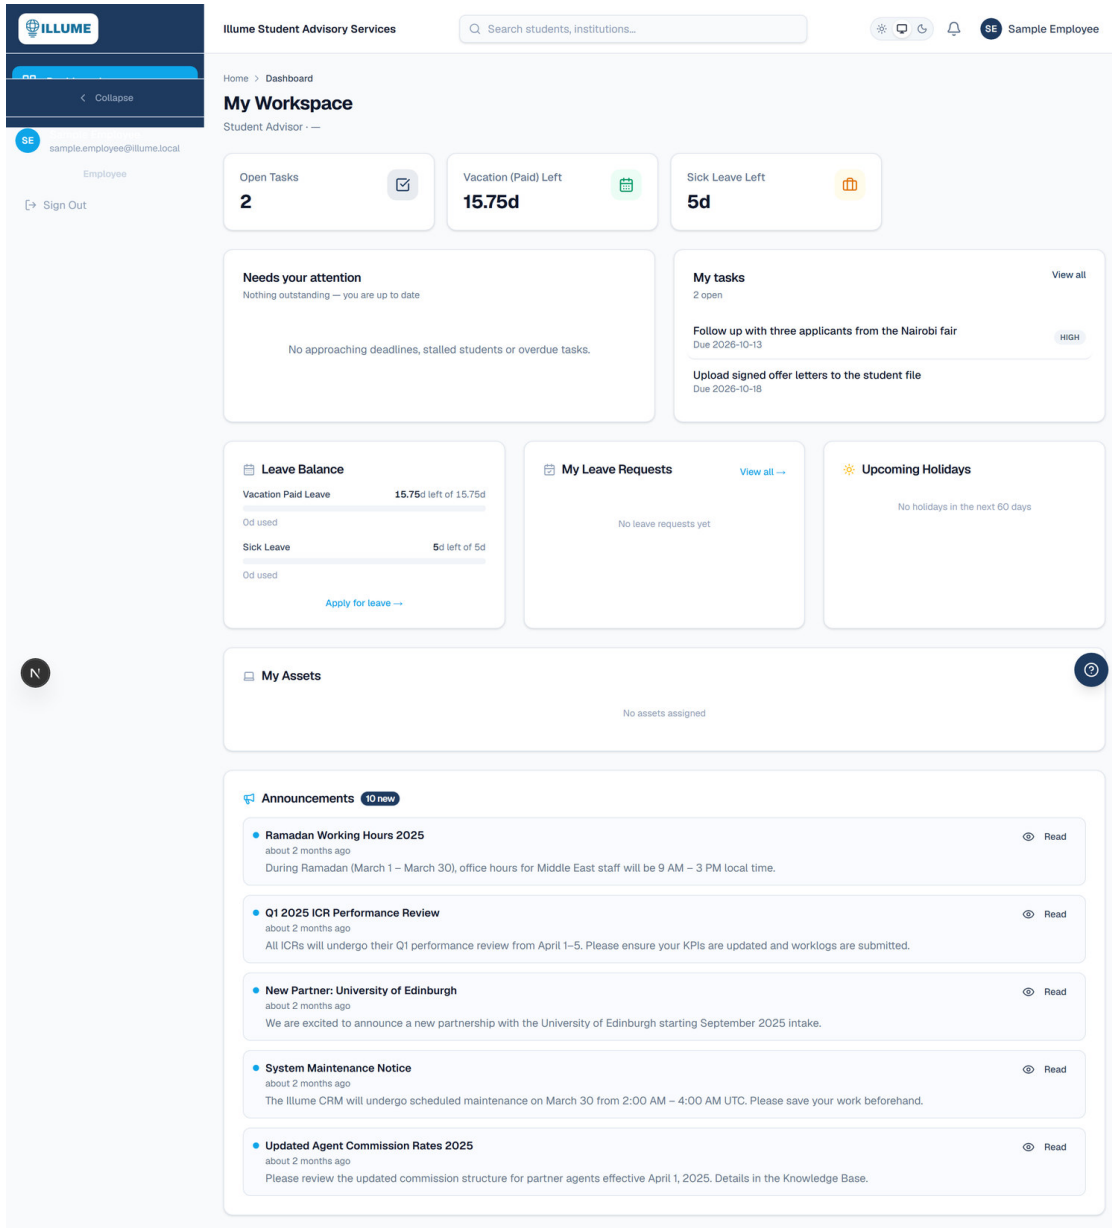

Figure 10 — The code prompt you will see at every sign-in from now on.

Every time you sign in from now on

Email → password → 6-digit code from your app. If the code is refused, wait for the app to show a new one and try again. Codes expire after 30 seconds.

4. Finding your way around

Once signed in you land on your dashboard. The menu on the left is how you move around the system.

The screenshot displays the ILLume Staff User Dashboard. On the left is a dark sidebar menu with the ILLUME logo at the top, a 'Collapse' button, and a user profile section for 'sample.employee@illume.local' with a 'Sign Out' link. The main content area is titled 'My Workspace' and includes a search bar for students and institutions. Key metrics are shown in three cards: 'Open Tasks' (2), 'Vacation (Paid) Left' (15.75d), and 'Sick Leave Left' (5d). Below these are two task cards: 'Needs your attention' (Nothing outstanding) and 'My tasks' (2 open tasks, including 'Follow up with three applicants from the Nairobi fair' and 'Upload signed offer letters to the student file'). Further down are 'Leave Balance' (Vacation Paid Leave: 15.75d left, Sick Leave: 5d left), 'My Leave Requests' (No leave requests yet), and 'Upcoming Holidays' (No holidays in the next 60 days). A 'My Assets' section shows 'No assets assigned'. At the bottom is an 'Announcements' section with 10 new items, including 'Ramadan Working Hours 2025', 'Q1 2025 ICR Performance Review', 'New Partner: University of Edinburgh', 'System Maintenance Notice', and 'Updated Agent Commission Rates 2025'.

Figure 11 — The dashboard. Your menu is on the left.

What each menu item is for

Menu item	What you use it for
Dashboard	Your summary: leave remaining, open tasks, and anything waiting on you.
Tasks	Work assigned to you, and work you have assigned to the people who report to you.
HR & ERP	Your own staff record: leave, public holidays, documents, assets and training.
Knowledge Base	Guides and reference material shared across the company.

If you do not see a menu item mentioned elsewhere in the company, that is normal. People only see the parts of the system their role needs.

5. Your staff record

Select HR & ERP in the menu. You are taken straight to your own record. The tabs across the middle hold the different parts of it.

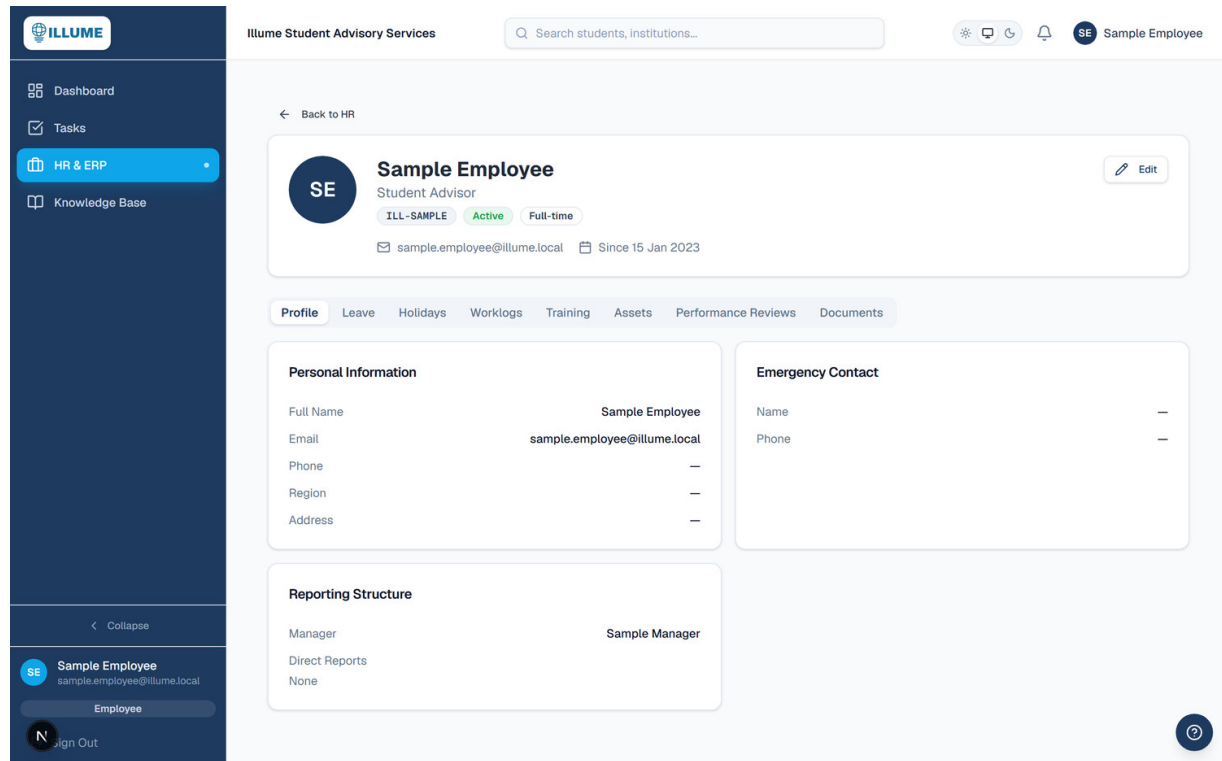

Figure 12 — Your own staff record, opened at the Profile tab.

- **Profile** — your job title, start date and contact details.
- **Leave** — how much leave you have left, and your leave history.
- **Holidays** — the public holidays that apply to you.
- **Worklogs** — time recorded against your work.
- **Training** — training assigned to or completed by you.
- **Assets** — company equipment issued to you.
- **Performance Reviews** — your review records.
- **Documents** — documents held on your record, such as your contract.

5.1 Checking your leave balance

Open the Leave tab. Your entitlement is shown at the top, with how much you have used and how much is left. Your leave history is underneath.

Your entitlement is worked out from your joining date, so it increases through the year rather than appearing all at once in January.

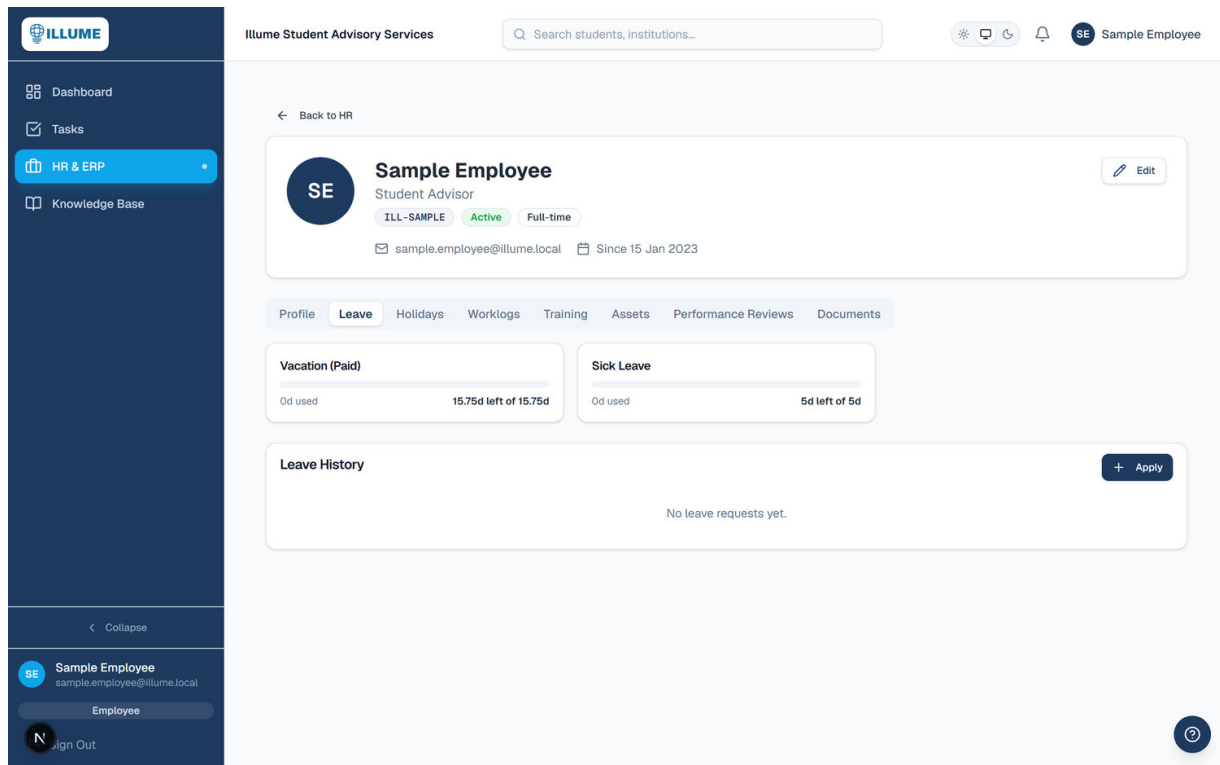

Figure 13 — The Leave tab: your balances at the top, your history below.

5.2 How your leave is worked out

Nobody allocates you a number at the start of the year. Your entitlement is calculated from your own joining date every time you look at it, so it grows through the year and a mid-year joiner is never short-changed. There is nothing to expire and nothing for anyone to forget to renew.

Leave type	How much	Available from	Resets
Vacation (Paid)	1.75 days added each month on the date you joined. Caps at 21 days	3 months after you join	31 December
Sick Leave	5 days, added on 1 January. Your first year is scaled to the months remaining	5 days after you join	31 December
Maternity Leave	22 days a year, not scaled	1 month after you join	31 December
Paternity Leave	10 days, added on 1 January. Your first year is scaled to the months remaining	1 month after you join	31 December

1.75 days a month comes to 21 over a full year, which is exactly the cap — so a full year of service reaches the ceiling and no further.

What this means in practice

- **Nothing carries over.** Whatever is left on 31 December does not move into the new year, and unused days are not paid out. Plan ahead rather than saving them up.
- **Days are held the moment you apply,** not when your manager approves. The figure you see already allows for a request that is still waiting, so you cannot accidentally book the same days twice.
- **Only working days are counted.** Weekends are skipped, and so is any public holiday that applies to your region — a week off over a public holiday costs you four days, not five.
- **Maternity and paternity depend on the gender on your record.** If the wrong one is offered to you, ask IT to correct your profile rather than working around it.

Your opening balance came from the old system

Leave you had already taken before this system went live has been carried across, so the figure you see is what you actually have left — not a fresh allowance. If it does not match your own record, raise it with your manager rather than assuming the system is right.

5.3 Applying for leave

Select Apply on the right of the Leave History panel.

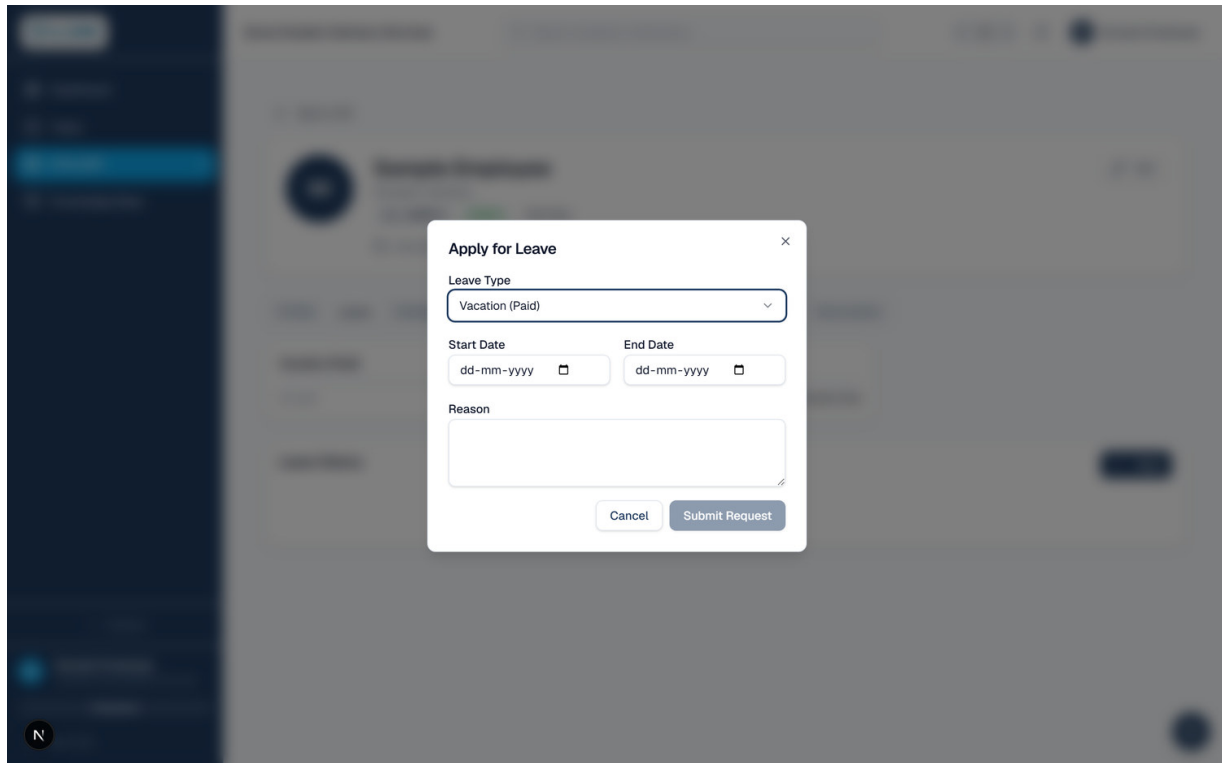

Figure 14 — The Apply for Leave window.

- 1 Choose the Leave Type — for example Vacation (Paid) or Sick Leave.
- 2 Pick your Start Date and End Date.
- 3 Check the number of days the system works out for you. It counts working days only and removes any public holiday in your region.
- 4 Write a short Reason. A line is enough — it helps your manager decide quickly.
- 5 Select Submit Request.

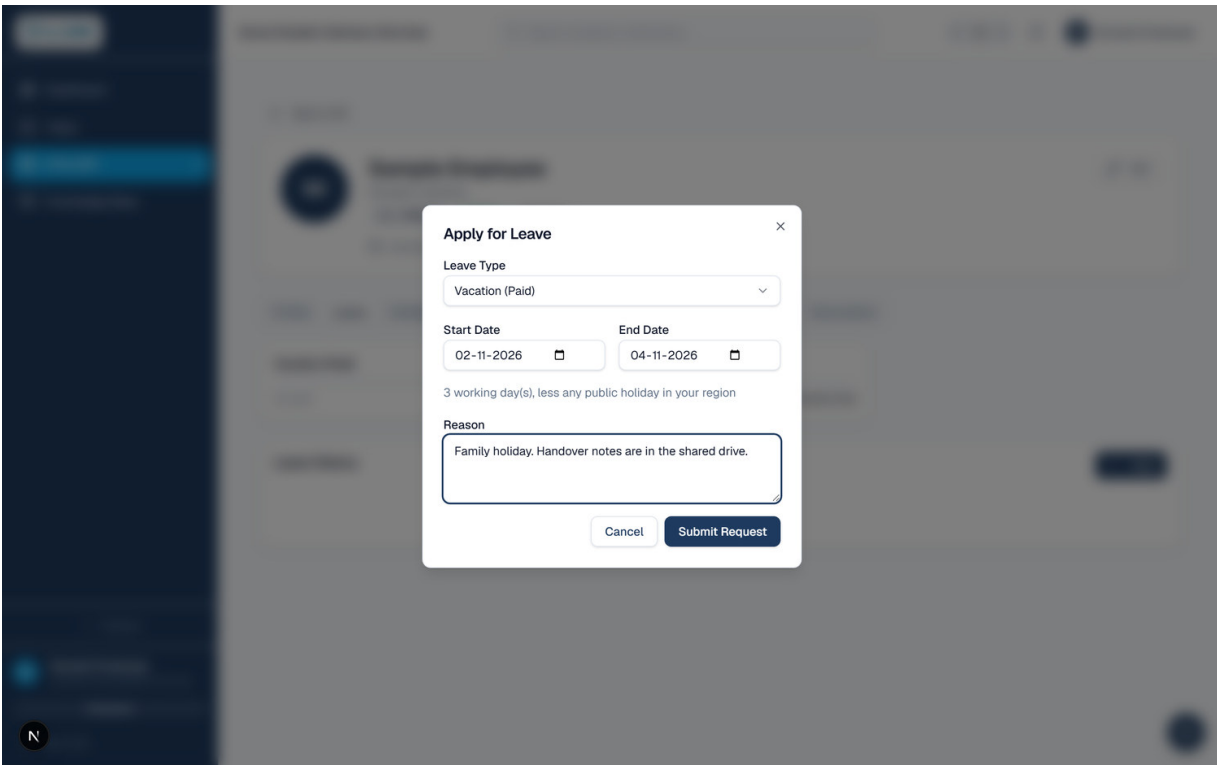

Figure 15 — A completed leave request, ready to submit.

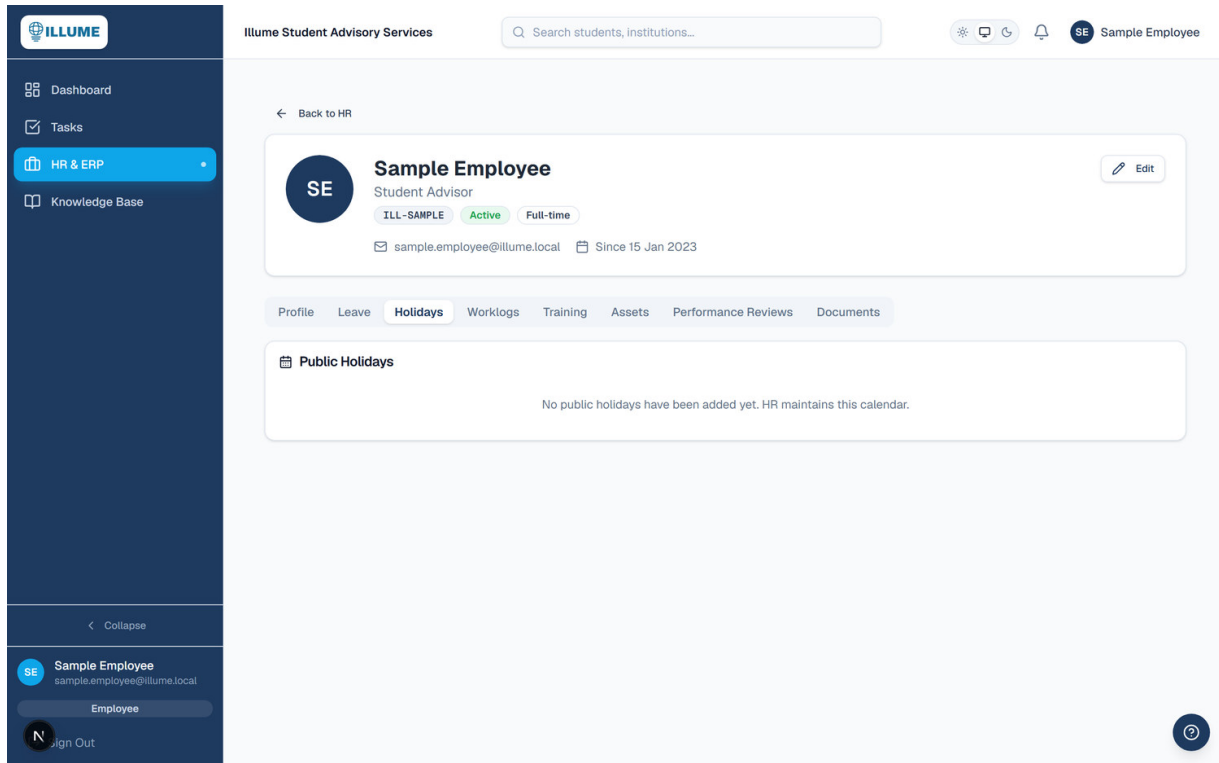

Your request goes straight to your line manager. They receive an email and a notification in the system. You will be emailed as soon as they approve or decline it, and the request will show in your Leave History with its status.

While your request is waiting

The days are held against your balance as soon as you submit, so the figure you see already allows for leave you have asked for but not yet had approved. You cannot book two periods that overlap.

5.4 Public holidays

Open the Holidays tab to see the public holidays that apply to you. IT maintains this calendar. If it is empty, the holidays for your region have not been entered yet — please ask your manager rather than assuming a day is a working day.

The screenshot displays the ILLUME HR & ERP interface. On the left is a dark blue sidebar with navigation options: Dashboard, Tasks, HR & ERP (selected), and Knowledge Base. At the bottom of the sidebar is a user profile for 'Sample Employee' with a 'Sign Out' button. The main content area is titled 'ILLume Student Advisory Services' and includes a search bar. Below the search bar is a 'Back to HR' link. The main profile card for 'Sample Employee' (Student Advisor) shows status as 'Active' and 'Full-time', with email 'sample.employee@illume.local' and start date 'Since 15 Jan 2023'. Below the profile card is a tabbed interface with 'Holidays' selected. The 'Public Holidays' section is currently empty, displaying the message: 'No public holidays have been added yet. HR maintains this calendar.'

Figure 16 — The Holidays tab.

6. Tasks

Select Tasks in the menu. The panel at the top summarises what is due, what is overdue and what you have finished this week. Your tasks are listed underneath.

Figure 17 — The Tasks screen.

Who can see your tasks

You see your own tasks, and any task you have assigned to someone who reports to you. Nobody else can see them — not colleagues, not other managers, not administrators. Equally, you cannot see a colleague's tasks unless you allocated them yourself.

6.1 Reminders you will receive

You do not need to watch the Tasks screen. Every task with a due date emails you four times:

- **When it is assigned to you** — immediately, by email and in the system.
- **One week before it is due**
- **Three days before it is due**
- **On the day it is due**

The three reminders arrive together in one message each morning, listing everything that needs you that day — not one email per task.

6.2 Updating a task

Select the status badge on a task to move it between To Do, In Progress, Waiting and Done. Keeping this up to date matters: it is what stops your manager chasing work you have already finished.

6.3 Attaching a file to a task

Each task row has a paperclip in the Actions column on the right. The number beside it tells you how many files are already attached. Select it to open the attachments window, where you can drag a file in or browse for one.

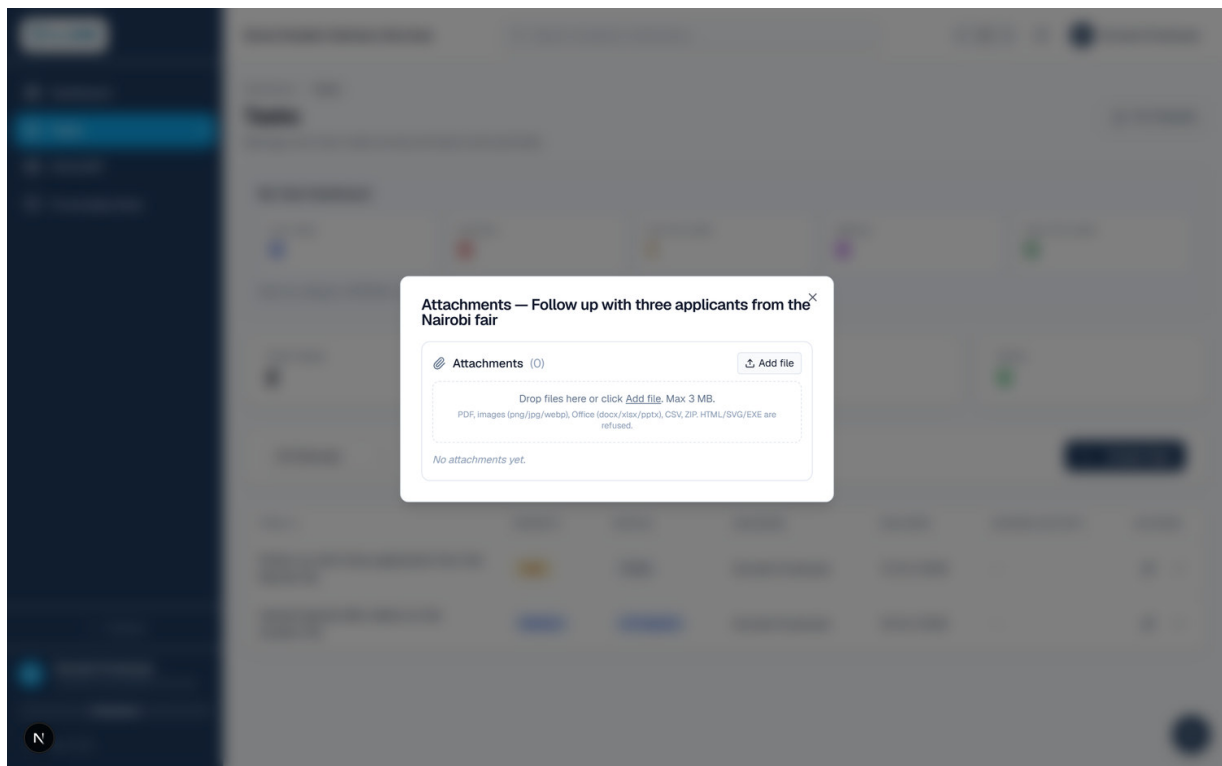

Figure 18 — The attachments window for a task.

- Files can be added by the person who holds the task and the person who assigned it.
- You can always delete a file you uploaded yourself.
- **Accepted:** PDF, images (PNG, JPG, WEBP), Office files (DOCX, XLSX, PPTX), CSV and ZIP.
- **Refused:** web pages and program files (HTML, SVG, EXE). This is a safety rule and cannot be overridden.
- **Size limit:** 3 MB per file. For anything larger, put it in the shared drive and attach a link in the task description.

6.4 Creating a task

Select Create Task at the right of the filter bar.

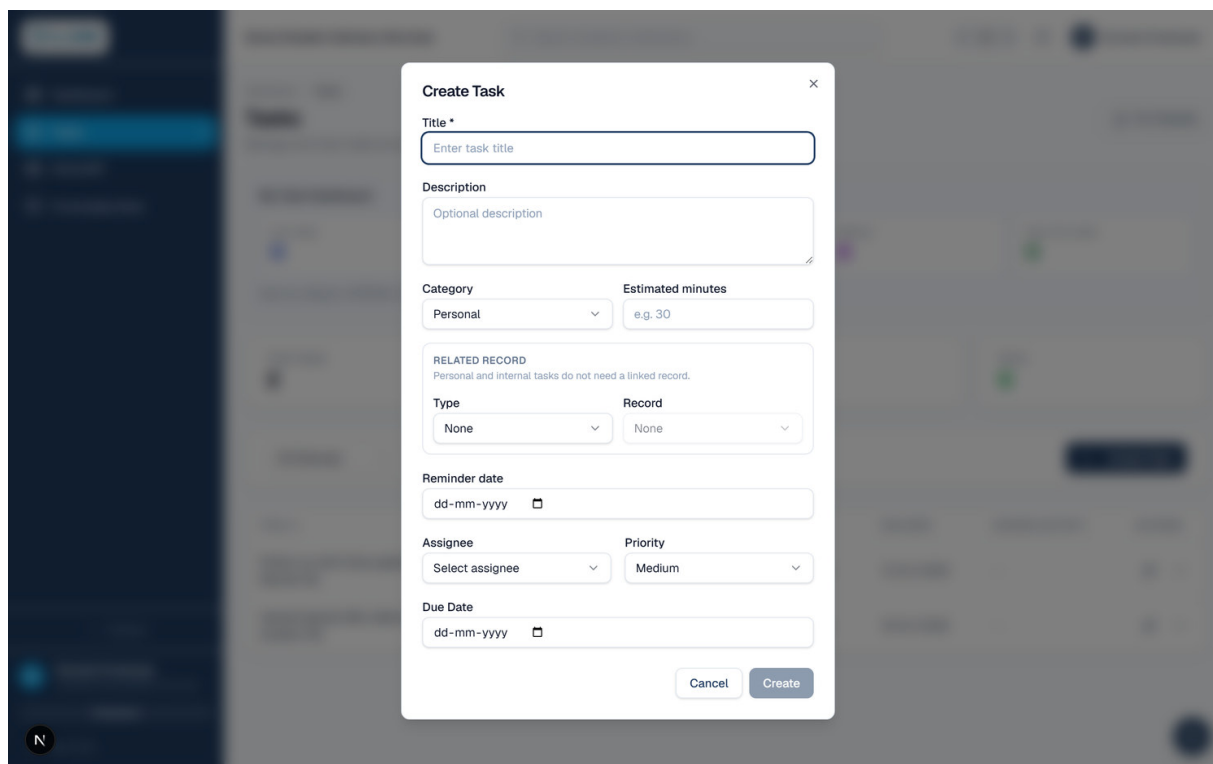

Figure 19 — The Create Task window.

- 1 **Title** — required. Write what needs doing, not the subject area. “Call the three Nairobi applicants” is useful; “Nairobi” is not.
- 2 **Description** — optional, but this is where handover detail belongs.
- 3 **Category** — Personal or Internal if the task stands alone. Any other category needs a linked record, which you choose under Related Record just below.
- 4 **Related Record** — only if the category requires it. Pick the Type, then the Record. Leave both as None for a personal or internal task.
- 5 **Assignee** — yourself, or someone who reports to you. See the note below.
- 6 **Priority** and **Due Date** — the due date is what drives the reminder emails. A task with no due date sends none.
- 7 Select Create.

If the task will not save

The usual reason is Category. Anything other than Personal or Internal must be attached to a record — a student, an institution, an event. Either pick the record under Related Record, or change the category.

Who you can assign a task to

You can assign a task to yourself, or to someone who reports directly to you. That is the whole list, and it is the same for everyone including administrators. If you need something done by someone outside your team, ask their manager to raise it.

7. If something goes wrong

Problem	What to do
I never received the welcome email.	Check your junk or spam folder first. If it is not there, ask IT to confirm the email address on your record and to send it again.
The link in my email says it has expired.	The link lasts 72 hours. Open the sign-in page, choose “Forgot password”, and a new link will be emailed to you.
Nobody has sent me a password.	That is correct — there is no temporary password. Use the link in the welcome email to create your own.
My 6-digit code is refused.	Wait for your app to show a new code and try again. If it keeps failing, your phone’s clock may be wrong — turn on automatic date and time on the phone.
I have lost my phone.	Use one of your backup codes to sign in, then set up the authenticator again on your new phone. If you have no backup codes left, contact IT.
I have lost my phone and my backup codes.	Contact IT. They will verify who you are and reset your two-factor setup. Nobody can do this for you over chat or email alone.
My account is locked.	Accounts lock after several failed attempts. Wait, then try again, or contact IT.
I cannot see a menu item a colleague has.	That is expected. People see only the parts of the system their role needs.
The Holidays tab is empty.	The calendar for your region has not been entered yet. Ask your manager before treating a day as a working day.

Keeping your account safe

- Never share your password, your QR code, your 6-digit codes or your backup codes with anyone — including anyone who says they are from IT.
- Illume will never ask you for a code by phone, email or message.
- Sign out when you finish on a shared or public computer.
- If you think someone else has used your account, tell IT the same day.

Who to ask

Your manager — leave requests and balances, public holidays in your region, and anything about your own work.

IT — access, passwords, two-factor authentication, corrections to your staff record, and anything that stops you signing in.

Document owner: IT. Reviewed annually, or whenever the onboarding or sign-in process changes.
